Answers to NCERT/CBSE Chemistry (Class XII) textbook

Chapter 15

POLYMERS

15.1 Explain the terms polymer and monomer.

Polymers are high molecular mass substances consisting of large numbers of repeating structural units. They are also called as macromolecules. Some examples of polymers are polythene, bakelite, rubber, nylon 6, 6, etc.

Monomers are simplest units from which the polymers are derived. example vinyl chloride, ethane. Formaldehyde.
